1.1 PURPOSE

This Software Requirement Specification (SRS) aims to bind the contract with the Malaysian Communication and Multimedia Commission (MCMC) and explain the goals, features, scope, and functional and non-functional requirements of the MySebenarnya System. This document is used to follow up with the Development Team and later used as a reference for stakeholders like MCMC officials, system developers, and other related agencies. It covers the system's design, data management, and security measures to comply with Malaysia's Personal Data Protection Act (PDPA). This document is intended for the system developers, the stakeholders which is the MCMC representative including the administrator who will manage and monitor the system's operations.

The MySebenarnya System aims to fight misinformation and provide the public with accurate and reliable information. The website would allow the public to fact-check news that they view via the Internet, thus bolstering efforts to combat fake news and promote digital literacy in Malaysia.

1.2 SYSTEM IDENTIFICATION

System ID	MSS.01.2024.TWC
System ID Description	<System Abbreviation><Version><Year Development><Company Name>

Table 1.1: System Description

The system identification for the *MySebenarnya System* is **MS.01.2024.TWC**. The “MSS” is the abbreviation for the system name (MySebenarnya System). The “01” represents the version number of the system. The “2024” refers to the year of development for the system. Lastly, the “TWC” is the name of the developer company (TrustWorthy Company).

Document ID	SRS_MSS_2024_V01
Document ID Description	<SRS><System Abbreviation><Year Development><Version>

Table 1.2: Document ID Description

The document identification for the *MySebenarnya System* is **SRS_MSS_2024_V01**. The “SRS” stands for System Requirements Specification. The “MSS” is the abbreviation for the *MySebenarnya System*. The “2024” indicates the year of publication for this document. Lastly, the “V01” is the version of the document.

SOFTWARE REQUIREMENT SPECIFICATION (SRS) FACULTY OF COMPUTING

Use Case ID	SRS.REQ.100 SRS.REQ.200 SRS.REQ.300
Use Case ID Description	<SRS><Requirement><Use Case Number>

Table 1.3: Use Case ID Description

The use case identification for the *MySebenarnya System* follows the format **SVS.REQ.100**. The “SRS” stands for Software Requirement Specification. The “REQ” is the abbreviation for requirement. The “100” represents unique identifiers for use cases within the system.

Requirement ID	SRS.REQ.101 SRS.REQ.102 SRS.REQ.103
Requirement ID Description	<SRS><Requirement><Requirement Number>

Table 1.4: Requirement ID Description

The use case identification for the *MySebenarnya System* follows the format **SRS.REQ.100**. The “SRS” stands for *MySebenarnya System*. The “REQ” is the abbreviation for requirement. The “101” represents unique identifiers assigned to each requirement.

1.3 SYSTEM OVERVIEW

The MySebenarnya System acts as a centralized platform for verifying the truth of news or articles that can be accessed by the internet. A public person can submit any ambiguous news to the system then it will be reviewed and forwarded to the agencies in charge for verification.

1. Module 1

In the MySebenarnya system, every user must create a user profile to access the system. Public users can register their account in the system and login using their registered email and password. They can view and manage their profile. Agencies obtain MCMC's credentials from their official emails, which are sent by MCMC, and use them to log into the MySebenarnya system securely. The related agencies also can view and manage their profile if necessary. Lastly, MCMC's IT department provides login credentials for system administrators to use to access the systems. They can manage user profiles for all users and review analytics of user data. User registration provides a unique identification for each user to ensure that every role has access to the system features and functions that are in control. The user profile data stores user information securely helps in tracking the user and makes the user interact easily with other modules in the system which includes submission form, tracking, and monitoring. Profile management enables users to edit their personal information and view usage history. Comprehensive profile data ensures strong security that helps protect sensitive information and ensures compliance with privacy laws that help maintain public trust. In addition, this module can generate a report about the list of users who use the system and can be accessed by system administrators and permitted agencies.

2. Module 2

The requirement about the capability to submit forms for the verification of the news validity will be like allowing the Public Person to submit news on the MySebenarnya System and the MCMC will receive the Public Person news form that it will be send to the related agency for the reply regarding the news category. This functionality ensures seamless through user-friendly form submission features. Only the Public Person who already have account in this website can make the submission. Furthermore, since the administrator received insufficient information in their submission, it makes difficulty to the administration and agencies to continue their progress. Therefore, we apply mandatory fields with instructions for the public person when submitting. Those are Title of the Fake News or subject, category, date and time, source of news, upload evidence that shall fill by the Public Person when doing any submission and describe the inquiries of them. If those mandatory fields do not fill, it cannot be submitted. At the same time there will be guidance for the Public Person while filling in their submission like pdf of interfaces of filling the submission with flows and each mandatory fields will have description while filling up. Then the MCMC will receive submission from Public Person. Lastly, there will be notification pop-out that public person has submitted and the Public Person can view their submission status at all time by clicking their inquiry title. Once the submission is completed the Public Person can only view their submission inquiry and reply answer of their inquiry. Furthermore, this module can generate report for MCMC to view the report of the inquiry submission they received.

3. Module 3

This module ensures that public person complaints are handled systematically and forwarded to the appropriate agencies for efficient resolution. The module streamlines complaint management by integrating automated and manual processes with the MySebenarnya system. Each complaint is connected to the relevant agency, such as government agencies or enforcement authorities, using the system's automatic classification techniques based on pre-established rules or algorithms. Classifications are manually reviewed and resolved by administrators in unclear circumstances. All relevant information is sent to the appropriate authority when complaints are categorized. Firstly, public persons submit complaint forms via the MySebenarnya system, including details such as the nature of the complaint, descriptions, classifications, and any relevant attachments. Then, The MCMC can get the list of complaint forms from a public person. After that, The MCMC manually reviews the submission, determines the appropriate agency for handling the complaint, and updates the system accordingly. After manual reviews, the MCMC classified complaints will be forwarded to the agency responsible for addressing the issue. The system notifies the agency and provides all the necessary details, including the complaint description, attachments, and categorization. The agency receives the complaint and begins its resolution process. The agency updates the MCMC system, detailing actions, current status, and complaint resolution. Lastly, The MCMC monitors the status of each complaint via the system's dashboard.

4. Module 4

The Monitoring Progress module in the MySebenarnya System helps administrators track the status of issues submitted by the public user regarding unverified news. This module allows administrators to monitor the progress of each inquiry, ensuring a smooth verification process. This module also allows administrators to keep track of the status and progress of issues that have been assigned to verification agencies. It ensures that the process is transparent and that agencies are held accountable for their actions, leading to more reliable information for the public user.

CHAPTER 2- PRODUCT DESCRIPTION

2.1 PRODUCT PERSPECTIVE

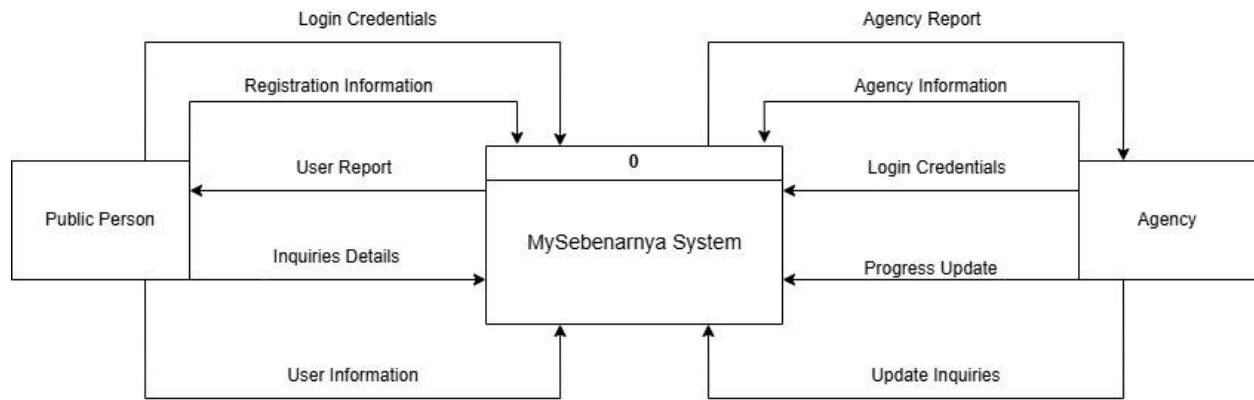

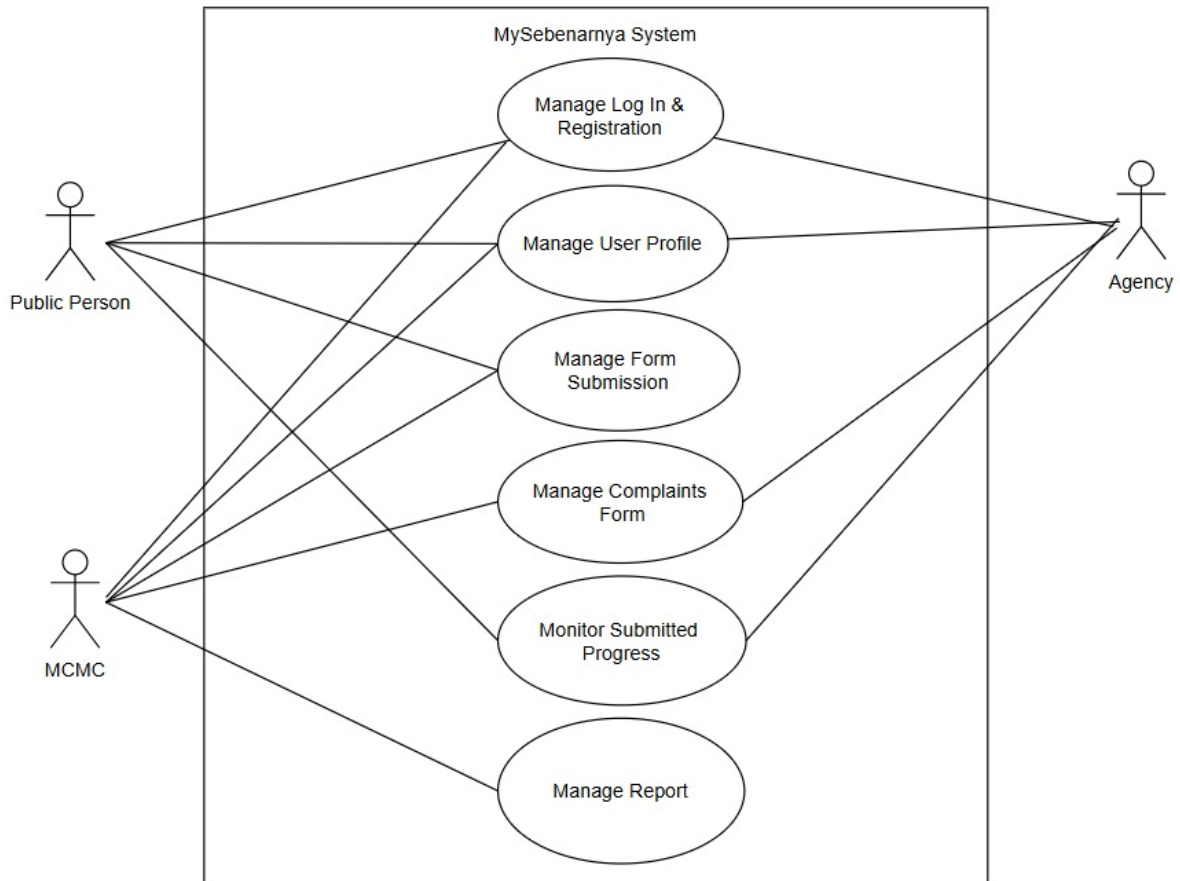

Figure 1

2.2 PRODUCT FUNCTION (registration login, manage user profile)

Figure 2

[Use Case Diagram]

2.3 USER CHARACTERISTICS

User	Education Level	Background Experience	Technical Expertise
Public Person	• No formal education required.	• General Internet users with basic browsing experience. • Individuals who consume news through online sources and social media.	• Ability to navigate websites and submit online forms. • Basic digital literacy, including uploading documents or providing submission details.
Administrators (MCMC)	• Bachelor's degree in IT, Computer Science or related field. MCMC worker.	• 2-5 years of experience in managing digital systems or web platforms. • Familiar with content management system and database management. • Previous experience in monitoring and assigning tasks within an organization.	• Proficient in managing system workflows, user roles, and permissions. • Basic understanding of cybersecurity, data encryption, and secure access protocols. • Ability to troubleshoot system errors and provide timely solutions.
Agencies	• Bachelor's degree in journalism, Law, Communications, or relevant specialization.	• 3-7 years of experience in journalism, research, fact-checking, or regulatory roles. • Expertise in analyzing data, cross-referencing sources, and verifying news authenticity. • Experience in handling sensitive or legal matters related to misinformation.	• Proficient in using fact-checking tools and verification software. • Ability to generate reports and provide updates on the progress of assigned cases. • Familiar with secure data handling and communication protocols.

CHAPTER 3-SPECIFIC REQUIREMENTS (SOFTWARE PRODUCT FEATURES)

3.1 USE CASE MANAGE FORM SUBMISSION

Table 3.1 Use Case Description for **MANAGE FORM SUBMISSION**

Use Case ID	SRS.REQ.200
Brief Description	This use case describes the functionality that allows registered Public Person to submit news inquiries on the MySebenarnya System for news validity verification. The submission process includes the Public Person to fill out mandatory fields, guided form filling and notification of successful submission and MCMC can view the Public Person submission same goes to the Agency. Public Person can edit and delete their submission form until the MCMC has not update the Form status to received.
Actor	Public Person MCMC Agency
Pre-Conditions	1. The public person must be logged into the MySebenarnya System.
Basic Flow	Public Person 1. The Public Person fills in the required fields. 2. The Public Person fill the Title/Subject of the Fake News 3. Public Person choose Agency Category Selection 4. Public Person chooses the Date and Time 5. The Public Person attach the source of the News

	6. The Public Person uploaded Evidence 7. The Public Person fill inquiry Description. 8. The Public Person click the <<Submit>> button. [SRS.REQ.200] 9. The system validates the mandatory fields. [A1: Missing Mandatory SRS.REQ.201] If all fields are valid, the form is submitted successfully. [E1: System Error During Submission SRS.REQ.203] 10. The system notifies the Public Person of successful submission, by notification message page. 11. The MCMC and Agency receives the submitted data for review and further action. 12. The Public Person can perform actions based on their form submission status like edit and delete if their status is still pending. SRS.REQ.202 13. The Public Person clicks <<Save changes>> button if they are editing the form submission. 14. The Public Person can click <<Delete>> button of their submission if the status form is still pending. SRS.REQ.202 15. The use case end. MCMC 1. MCMC clicks <<View>> button Inquiry that will display the public person submission Inquiries. SRS.REQ.204 2. MCMC will click <<Update>> button the form status to received that will change in the Public Person interface also. SRS.REQ.204 3. The use case end.
--	--

	Agency 1. Agency click the <<List of complaints>> button and can view the public person submissions. SRS.REQ.205 2. The use case end.
Alternative Flow	A1: Missing Mandatory Fields [SRS.REQ.201] 1. The Public Person submits the form with missing or incomplete mandatory fields. 2. The system highlights the missing fields and prevents form submission. 3. Continue with steps 1.
Exception Flow	E1: System Error During Submission [SRS.REQ.203] 1. The Public Person attempts to submit the form. 2. A system error (e.g., server downtime, network issue) occurs. 3. The system displays an error message to the public person. 4. The Public Person can retry submission after resolving the issue or when the system is restored. 5. The use case continues at Basic Flow step 1.
Post-Conditions	1. The submission is successfully saved in the system database. 2. The MCMC receives the submission details for review. 3. The Public Person receives a notification confirming their submission.
Rules	All mandatory fields must be completed before form submission.
Constraints	The system must be integrated with external/internal data sources for duplicate inquiry validation.

3.2 USE CASE MANAGE REPORT

Table 3.2 Use Case Description for **MANAGE REPORT**

Use Case ID	SRS.REQ.500
Brief Description	This use case describes the functionality that allows registered MCMC to view the general report of form inquiry submission by Public Person. Where MCMC can view the report of form inquiry submission.
Actor	MCMC
Pre-Conditions	The public person must be logged into the MySebenarnya System.
Basic Flow	1. MCMC navigates to the "Manage Reports" section. SRS.REQ.501 2. MCMC clicks <<View Report>> button to display report of inquiries made by the Public Person. SRS.REQ.502 3. The use case ends.
Alternative Flow	None
Exception Flow	None
Post-Conditions	The updated status is stored in the database.
Rules	Only registered MCMC personnel can access this feature.
Constraints	Updates must comply with data integrity and security policies. SRS.REQ.503

3.1 Use Case Manage Form Submission Sequence Diagram

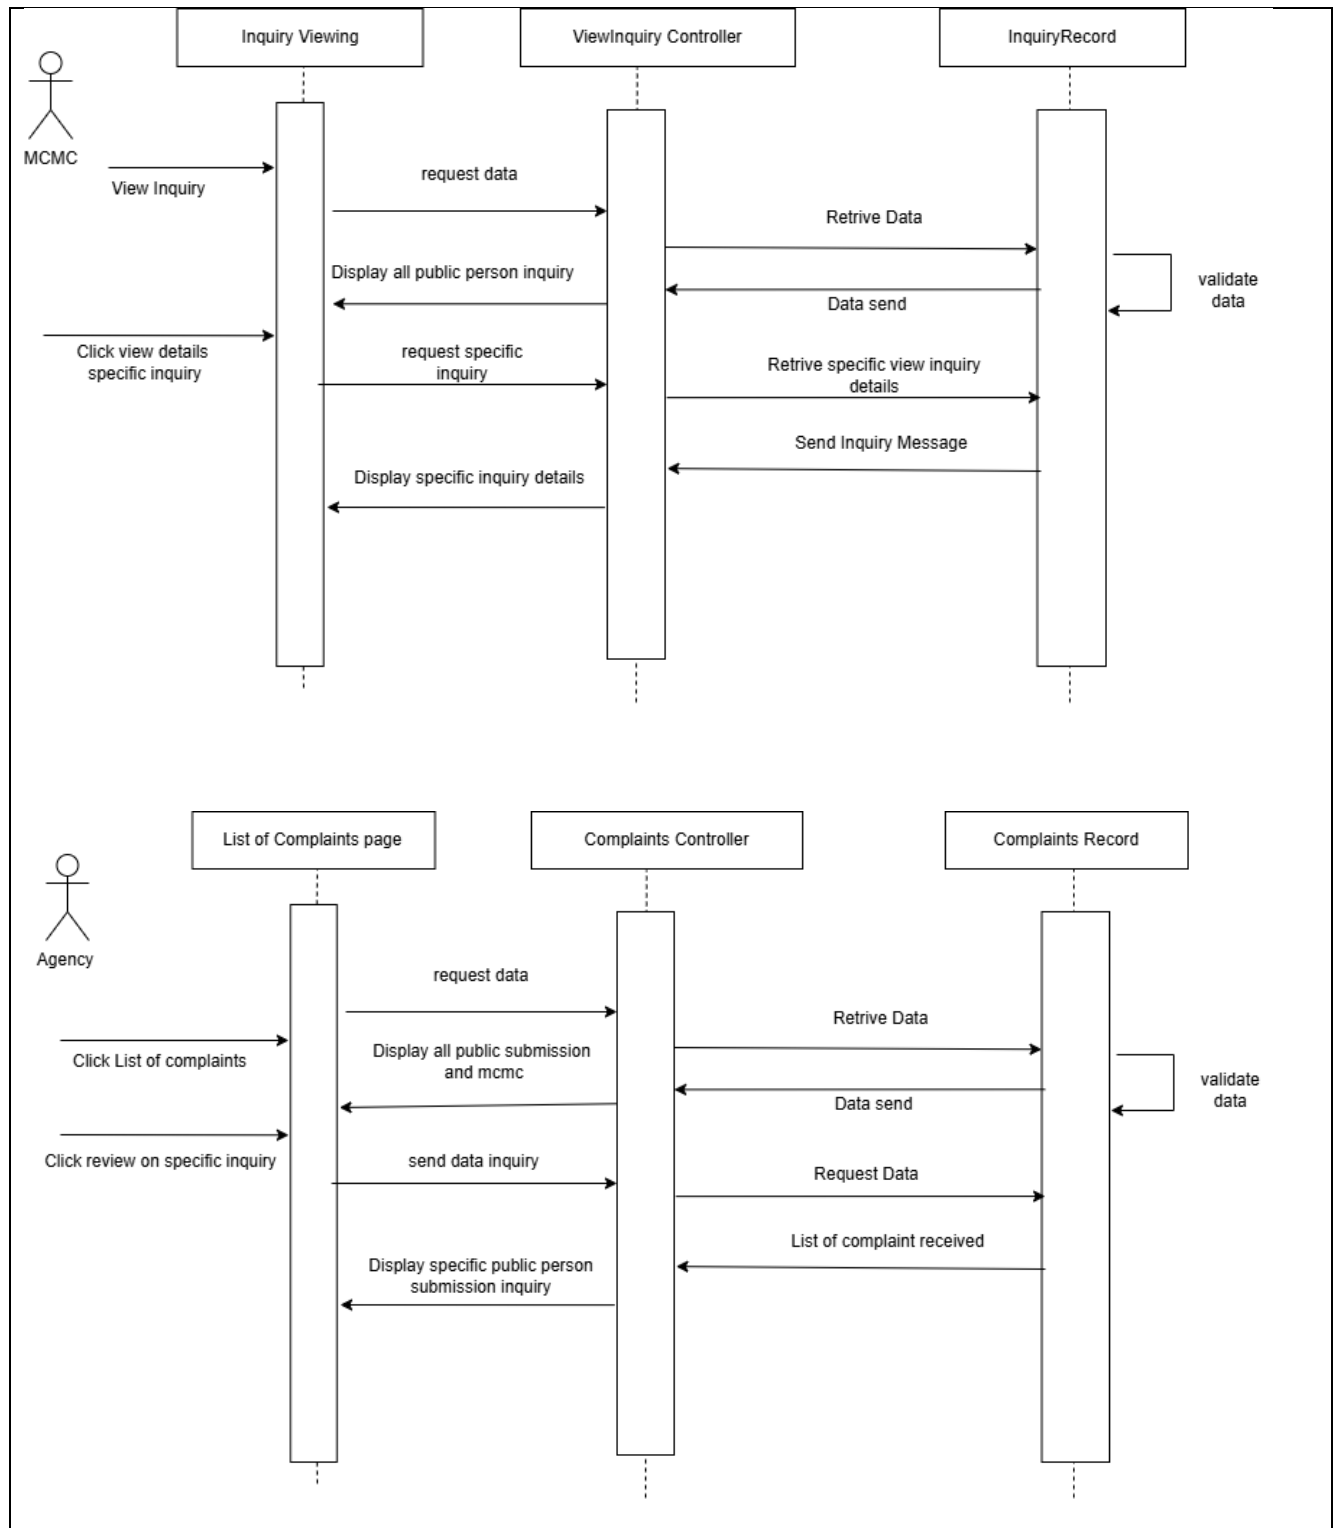

Figure 3.1 Basic Flow for Use Case Manage Form Submission.

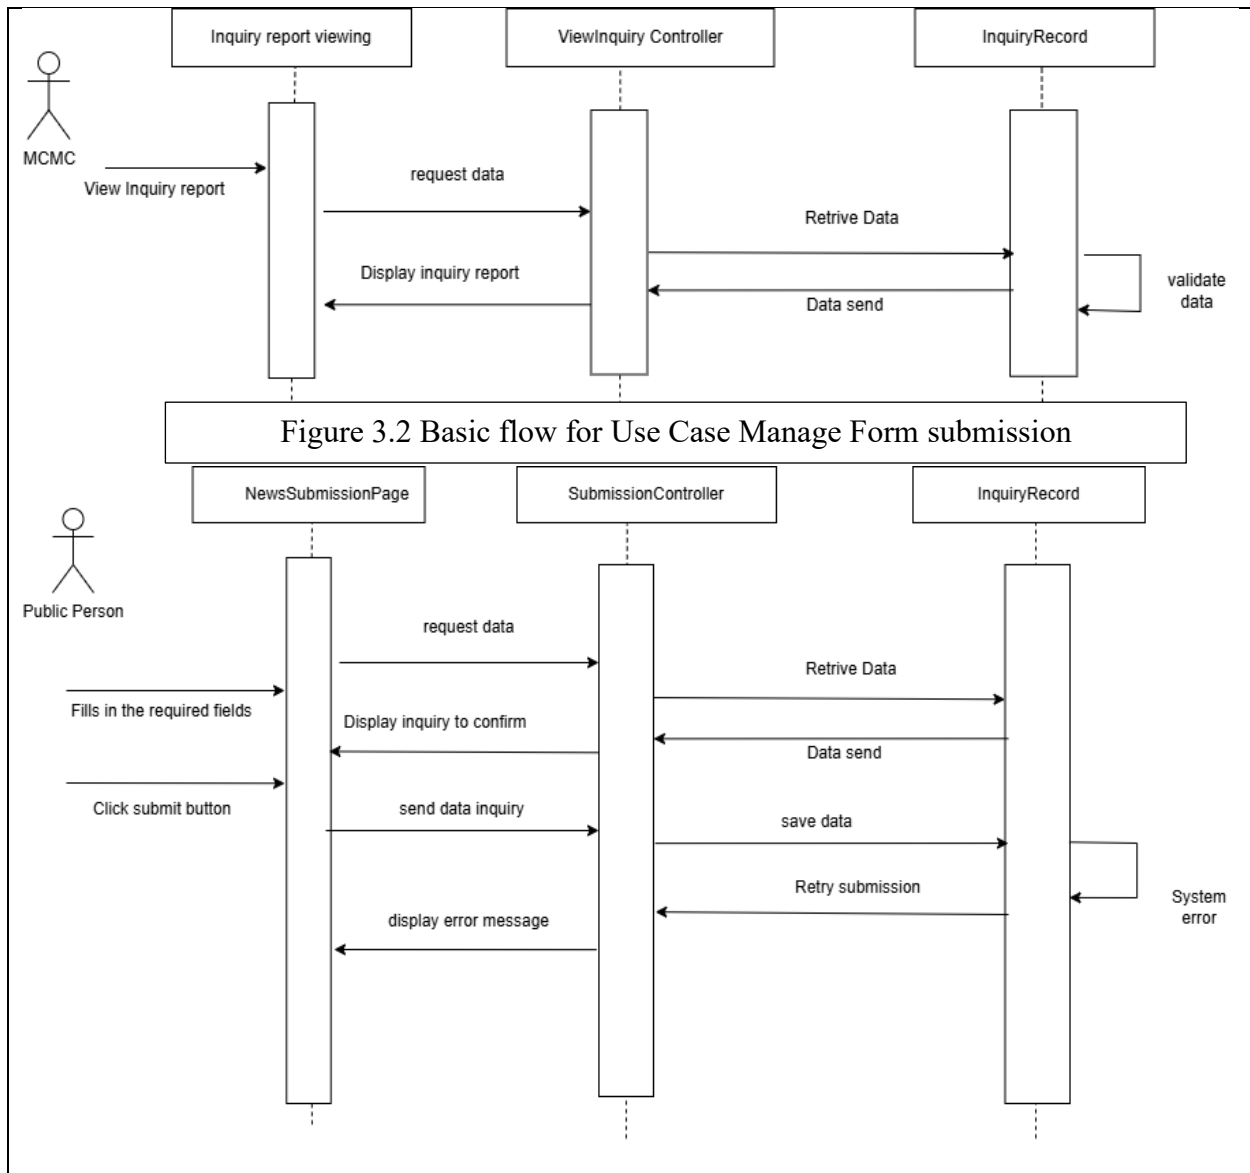

Figure 3.2 Exception Flow for Use Case Manage Form Submission

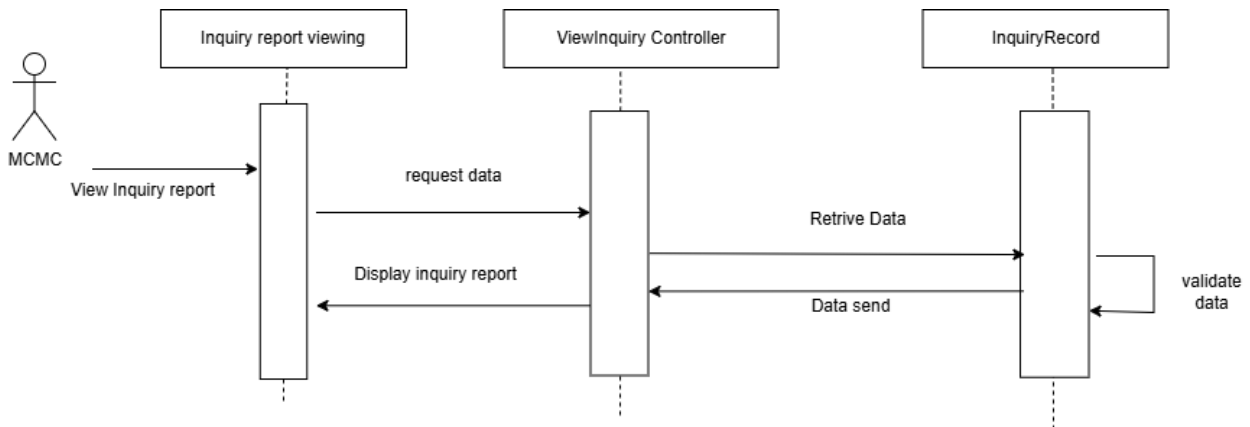

Figure 3.4 Sequence diagram for Manage Report

The screenshot shows the 'Submit Inquiry' page of the MySebenarnya website. On the left is a dark green sidebar with the MySebenarnya logo and a menu containing: Profile, Submit Inquiry (highlighted), Your Submissions, Notifications, and Logout. The main content area is white and titled 'Submit Inquiry'. It contains several form fields: 'Title of Fake News/Subject' with a placeholder 'Provide a clear and concise title or subject of the fake news.'; 'Agency Category Suggestion' with a dropdown menu showing '-- Select a Category --'; 'Date and Time' with a date and time picker; 'Source of News' with a placeholder 'Provide the URL or source of the news.'; 'Upload Evidence' with a 'Choose File' button and a note 'No file chosen'; and 'Describe the Inquiry' with a large text area and a placeholder 'Provide a detailed description of your inquiry.' At the bottom of the form are two buttons: 'Submit' (green) and 'User Manual' (blue). A footer at the very bottom reads '© 2025 MySebenarnya. All rights reserved.'

Figure 3.5 Interface of Public Person Submit Form Page

The screenshot shows the 'MySebenarnya - User Manual' page. It has a dark green header with the title 'MySebenarnya - User Manual'. The main content area is light gray and contains a white box titled 'How to Submit an Inquiry'. Inside this box, it says 'Follow these steps to successfully submit your news verification inquiry:' followed by a numbered list of 7 steps: 1. Title of Fake News/Subject, 2. Category, 3. Date and Time, 4. Source of News, 5. Upload Evidence, 6. Describe the Inquiry, and 7. Submit. Below the list, it says 'After submission, you can track the status of your inquiry on the "Your Submissions" page.' At the bottom of the white box is a green button labeled 'Back to Submit Inquiry'. A footer at the very bottom reads '© 2025 MySebenarnya. All rights reserved.'

MySebenarnya
Fake News Detection Center

Submit Inquiry

Title of Fake News/Subject *
Penyakit COVID-19 di SMK Kampung Duyong
Provide a clear and concise title or subject of the fake news.

Agency Category Suggestion *
Kementerian Kesihatan Malaysia
Select the appropriate category for the news.

Date and Time *
06/01/2025 08:19 PM
Specify the date and time when the news was encountered.

Source of News *
Provide the URL, or source of the news.
Please fill out this field.

Upload Evidence *
Upload a screenshot, document, or image as evidence.
Choose File | WhatsApp Image 2025-01-10 at 16:46:16 (1).jpeg

Describe the Inquiry *
Provide a detailed description of your inquiry.
Adakah benar pelajar yang belajar di SMK Kampung Duyong dijangkiti dengan penyakit COVID-19?
